

KATADYN CAMP - *the practical water filter for large amounts of water*

PRODUCT CHARACTERISTICS

Technology: Gravity filter, ceramic depth filtration (0.2 microns = 0.0002 mm pores)
 Effect: Eliminates bacteria*, protozoa, cysts*, algae, spores, sediments and viruses in combination with particles greater than 0.2 microns. Reduces radioactive particles.
 Output: Approx. 5 l/h
 Capacity: Up to 20,000 l depending on water quality
 Weight: Approx. 620 g
 Size: 10 x 19 cm
 Guarantee: 2 year
 Material: Silicone, resistant plastics
 Article No.: 8013637

Series: Endurance

* see testresults on backside

FACTS

- Pumping not necessary thanks to gravity
- The Camp filter consists of a siphon filter and a 10-litre Ortlieb water bag.
- The siphon is attached to the inside of the water bag with an adapter; the water bag is filled and hung up, e.g. from the nearest tree
- The tried and tested ceramic depth filter removes bacteria, protozoa and other disease-causing agents. The principle: The micro-organisms cannot pass through the mini pores of the filter ceramic (0.2 microns) because of their size (greater than 0.2 microns = 0.0002 mm)
- Unlike disposable filters, the ceramic filter can be cleaned several times - even in the field
- The fastest non-pump filter

PRODUCT CHARACTERISTICS > BENEFITS

- High performance of 5 l per hour > can also be used for larger groups
- Gravity filter > convenient water filtering without pumping
- Ceramic filter element > filters clear and turbid water
- Compact filter, foldable water bag > minimum weight and space requirement
- Ceramic filter element can be cleaned > long implementation
- Measuring gauge supplied > indicates when the filter should be changed

SHORT PROFILE
 Practical water filter with high water performance. For 1 to 10 people. Ideal for families, camps, expeditions, tour operators, scouts or armies.

GRAVITY FILTRATION

Pumping is not necessary with gravity filtration. This means valuable time is free for other activities such as cooking or setting up tents. After about 20 minutes - the average amount of time you need for setting up camp - about 1.5 litres of water is already available. The performance depends on the difference in height between the filter and container. The filtered water is retained in a separate canister or water bag.

Tip: The opening of the canister/bag for the filtered water should be as small as possible to stop any dirt getting in. Recommendation: If the water is not to be used on the same day, use Micropur to preserve the water (preservation for up to six months).

TESTS (Katadyn ceramic filter)

Spectrum Labs, Inc. St. Paul MN, 30.7.1999: Klebsiella terrigena SM 9222F

Ministry of Water, Dar es Salam, Tanzania, 08.04.1998: 300 NTU, fecal coliforms

M.A. Ahdeldadir, Food & Environment Control Centre, Abu Dhabi, U.A.E., 16.2.1992: Aerobacter aerogenes, Escherichia coli, total Coliforms, Klebsiella sp., Pseudomonas sp.

Institut Pasteur de Lille, 1976: Escherichia coli, Clostridium, Salmonella St. Paul, Salmonella paratyphi, Fecal Streptococci
