

**KATADYN POWERSURVIVOR 160E\*** - Katadyn's top performing desalinator

**PRODUCT CHARACTERISTICS**

Technology: Reverse osmosis  
 Salt Rejection: 98.4% on average (96% minimum). The desalination degree depends on factors such as water temperature and salinity  
 Flow: Approx. 25.4 l/h +/-15%  
 Weight: 16.8 kg  
 Dimensions: 40.6 x 35.5 x 15.2 cm (Pump)  
 63,5 x 8,9 cm (Membranehousing)  
 Current: 12 Volt DC / 18 amp  
 24 Volt DC / 12 amp  
 Guarantee: 3 years  
 Material: Stainless steel, plastics. Membrane approved by the US FDA (Food and Drug Administration)  
 Authority  
 Article No.: 8013421 12 V  
 8013422 24 V

\* Earlier PUR PowerSurvivor

**FACTS**

- Device for greatest convenience with unbeatable advantages (see Benefits).
- Thanks to its high performance of over 25 liters/hour, the 160E is also suitable for large boats and charters.
- Compact and highly durable product which has been put to the test by, e.g., ocean sailors.
- Available as 12V or 24V unit.
- Makes boat owners independent of water stations on the coast.
- Covers entire daily water requirement (drinking, showering, cleaning etc.) of 12 people. By the way: the water requirement is much less on board than on land.

**PRODUCT CHARACTERISTICS > BENEFITS**

- 25.4 liters of water per hour > brings comfort on board and covers the entire daily water requirement of 12 people
- High energy efficiency > low current consumption
- Not an oversized system > fewer water standstill times, lower risk of germs reforming + higher useful life of membrane than with large systems
- Runs smoothly > does not disturb the enjoyment of being at sea
- Supply of drinking water independent of location > saves water reserves and costs with a better water quality
- Very user-friendly design > simple to install, operate and maintain
- Does not require additional pump and no reverse cleaning systems
- Tough design > 3 year guarantee

**SHORT PROFILE**

A desalinator which covers all water requirements on board in an elegant and intelligent way. Ideal for up to 12 people or larger boats and yachts.

**KATADYN POWERSURVIVOR 160E\*** - Katadyn's top performing desalinator

**REVERSE OSMOSIS**

To remove dissolved salts from seawater with reverse osmosis, part of the salt water is filtered through a semipermeable membrane. Only 10% of the water passes through the membrane. The remaining 90% flow past the membrane and at the same time cleans the membrane (self-cleaning effect). The small size of the "membrane pores" ensures extremely pure drinking water, but extremely high pressures must be generated - normally 55 bar.

Reverse osmosis is used worldwide to obtain drinking water, e.g. in the semi-conductor industry and in medicine.

**KATADYN'S PATENTED ENERGY RECOVERY SYSTEM**

The Katadyn Energy Recovery system takes advantage of stored energy in the high pressure reject water that is typically wasted. The pressurized reject water is recirculated to the back side of the piston to aid the next stroke. This energy is kept in the system, resulting in less work to achieve fresh water.

**CONDITIONS OF OPERATION**

Battery with at least 60Ah/12 V. The PowerSurvivor can be connected to existing sea valves. Appropriate adapters are supplied.

**OPTIONS FOR POWERSURVIVOR**

Silt Reduction Kit:

For waters with high levels of suspended matter, e.g. in shallow anchorage, we would recommend you use an additional prefilter. This additional filter is finer (5 microns - 1 micron = 0.001 mm) than the standard filter (30 microns) and is placed after it. A booster water pump (12V/0.8 A/h) is also provided. This pump compensates for the loss through the second filter and increases water production. We would also recommend the prefilter kit when the PowerSurvivor is not installed under the water line and when it is in constant use to increase the intervals between servicing.
